

Shipping VTC core sprockets

The best and cheapest way that I've found to ship VTC pulleys is via USPS Priority Mail using a medium (11"x8½"x5½") flat-rate box. The boxes are free at your local Post Office and the cost to ship is a low flat-rate to anywhere in the USA (insurance is extra). The following method will fit up to six VTC in the box (place cardboard between individual pulleys to protect cam seal surfaces).

Cut two strips of cardboard 8½" wide x 16½" long, roll the cardboard over the sprocket and tape it together at the joint, pack newspaper in each end of the tube and place into a USPS flat-rate 11"x8½"x5½" box.

Please fill out and include a Core Credit Refund sheet, which you can download at: <http://bde-performance.com/cores.htm>

figure 1 – two strips of cardboard 8½" wide x 16½" long

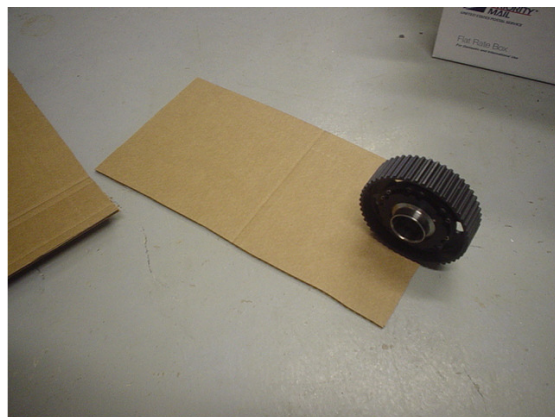

figure 2 – place up to three sprockets and roll

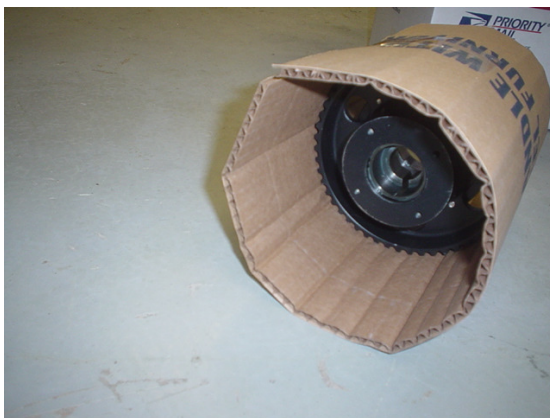

figure 3 – tape cardboard at joint

figure 4 – pack ends with paper and place into box
